to the profession promptly attended to.  
Office: Record floor James Block, in the  
room formerly occupied by the late James  
R. Brown.

## DOCTOR ALBRIGHT

### A BROAD MINDED PHYSICIAN WITH PROGRESSIVE IDEAS.

Believes in Recommending Any Medicine That He  
Knows Will Cure His Patients. Thinks  
Dr. Williams' Pink Pills a Great  
Discovery. He Sites Some  
Marvelous Cures.

From the Examiner, Lancaster, Pa.  
"A. KRON, PA., April 24th, '95.  
Dr. Williams' Pink Pills. - While it is entirely contrary to  
the custom of the medical profession to  
recommend any of the so-called proprietary  
preparations, I shall, nevertheless,  
give you an account of some of my wonderful  
experiences with your preparation, Dr. Wil-  
liams' Pink Pills for Pale People. The fact  
is well known that medical practitioners do  
not as a rule, recognize much less use pre-  
parations of this kind, consequently the body  
of them have no definite knowledge of their  
virtue or lack of it, but soundly condemn  
them all without a trial. Such a course is  
manifestly absurd and unjust, and I, for one,  
propose to give my patients the best treatment  
known to me, for the particular disease with  
which they are suffering, no matter what it is  
where or how obtained. I was first brought  
to prescribe Dr. Williams' Pink Pills about  
two years ago, after having seen some remark-  
able results from their use. Reuben Hoover,  
son of Reading, Pa., was a prominent con-  
tractor and builder, while superintending the  
work of erecting a large building during cold  
weather, he contracted what was thought  
to be sciatica. He having first noticed it one  
morning in not being able to arise from his  
bed. After the usual treatment for this dis-  
ease he failed to improve, but on the contrary  
grew rapidly worse, the case developing into  
hemiplegia, or partial paralysis of the entire  
right side of the body. Electricity, liniment  
and massage, etc., were all given a trial, but  
nothing gave any benefit, and the paralysis  
continued to dispair. He was compelled to  
hear his physician announce that he was dead.  
About that time his wife noticed one of  
my advertisements and caused him to try your  
Pink Pills.

"He had given up hope and it required a  
great deal of begging on the part of his wife  
to persuade him to take them regularly. He  
however, did as she desired, and it ap-  
peared to indicate health in this man, one  
would think he was better than before his  
paralysis.  
"Why," says he, "I began to improve in two  
days, and in four or five weeks I was entirely  
well and at work."  
"Having seen these results I concluded  
that such a remedy is surely worth a trial at  
the hands of any physician, and consequently  
I have since that time been called upon to  
treat a lady suffering with palpitation of the  
heart."  
State Education.  
The State University, at Columbus,  
has just issued a circular to the high  
schools of the state making inquiry con-  
cerning their work, with a view to  
closer organization of the state sys-  
tem. There are many excellent things  
in this little circular which ought to be  
placed before the public. It is im-  
possible, however, to quote them all,  
but the following are certainly worthy  
of perusal:  
"Defining the state system of public  
education the circular says: 'A state  
system worthy of the name should offer  
every opportunity and inducement to  
its entire school population to pass by  
systematic methods, easily apprehended  
by those who are to receive the  
benefits, in school an order proper con-  
trol, from the lowest seat in the pri-  
mary school to graduation by a univer-  
sity of high standing. It is not to be  
supposed, of course, that all pupils can  
or will accept these opportunities and  
respond to these inducements. But  
the highest welfare of the state de-  
mands that both opportunity and in-  
ducement should be continually present,  
and that the broad and firm high-  
way of sound training and of higher  
learning should be freely opened to  
every child of the state."  
"This state system is naturally di-  
vided into three great sections. The  
first includes the rural or district  
schools and the work done in the first  
eight grades of the city schools. This  
section is generally given the name of  
'the grades.' The second division in-  
cludes the high schools. The work of  
the third division is done by the uni-  
versity."  
As to the position of the university  
in this system the following may be  
quoted: "The university is the thir-  
teenth, fourteenth, fifteenth and six-  
teenth grades of this state system of  
free public education. Its work is re-  
lated to that of the high schools pre-  
cisely as their work is related to that  
of the district schools. The work of  
the university is to lead forward from  
the high school to work in the uni-  
versity as he looks forward from the  
grades of the rural school to work in  
the high school."  
The principal of every high school  
ought to feel that the most proper and  
adequate measure of his value to his  
community is the number of students  
whom he induces to pass into the uni-  
versity. There should be no more  
thought of stopping at the close of the  
high school than of stopping at the close  
of the district school. The ease with  
which students from the high school  
enter the university and move along  
university lines ought to measure  
and does measure the influence and  
teaching power of the teachers in  
high schools."  
The university authorities wish it  
distinctly understood that they recog-  
nize that the first duty of every school  
is to its own community with of ne-  
cessity. There should be a course of study which  
though not primarily designed as pre-  
paratory to higher work, will give  
those who complete such course suffi-  
cient preparation to enter some course  
in the university if they desire to con-  
tinue their studies. The trustees and  
the faculty will do all in their power  
to strengthen and build up the local  
schools, whether accredited to the uni-

quired for a portion of milk when pal-  
ated to the consumers.  
It is worth of notice that the work  
was done by students for which it  
will be seen they received \$1,335.41.  
The gross income from each cow actu-  
ally in milk was \$147.80, the expense  
\$99.19, leaving a net income per cow of  
\$48.61, or for herd of twenty-six cows a  
net gain of \$1,264.26.

Corn Harvesters.  
The Deering Harvester Co., and the  
McCormick Harvester Co., each oper-  
ated their own harvester and binder  
on the Ohio State university farm, Oc-  
tober 2. This was in no sense a com-  
petition, as the two were merely oper-  
ated that those who were interested  
might see the efficiency and practical-  
ity of the machines. A heavy frost  
had already ripened the corn and the  
day being extremely dry, conditions  
were not favorable for the trial of  
such machines. Naturally many of  
the leaves fell off as they would do  
upon the slightest touch and some ears  
were knocked off. In the condition of  
the corn, however, it was surprising to  
note how few ears were knocked off  
by either machine.

The corn was quite large, averaging  
perhaps upward of nine feet high, was  
well cared and somewhat thick, al-  
though it was standing as well as  
could ordinarily be expected at this  
date. Both machines took up down  
corn successfully even when purposely  
broken in the opposite direction from  
which the machine was going. Under  
such conditions a stalk would be occa-  
sionally left by either machine, but on  
the whole the McCormick was the  
most successful in taking up down  
corn. The Deering binder took up in  
a standing position, while the Deering  
binder binds them while in a horizontal  
position. The result is that the butts  
are more even with the McCormick  
binder.

As operated, the McCormick bound  
bundles about one-half larger than  
the Deering. Both apparently could  
bind equally tight. The McCormick  
machine cut the corn of more square-  
ly and left a cleaner, better looking  
row of stubs. A single dynamometer  
test was made of each machine under  
as nearly like conditions as possible.  
The draft of the McCormick was about  
225 pounds, while that of the Deering  
was 225 pounds.

A large number of students and  
others witnessed the operation of the  
machines and were convinced that the  
McCormick binder was superior to the  
Deering binder. It should be noted, however, that these  
machines cut only one row at a time,  
and hence do not decrease the expense  
of harvesting corn in the same propor-  
tion that the self-binder reduces the  
expense of harvesting small grains.

The Red Seal of Florida in Ohio.  
At the October meeting of the Co-  
lumbian Horticultural society, Mr. E.  
Boyer, a post graduate student of  
the School of Agriculture of the Ohio  
State University, reported having  
found what appeared to be the Red  
Seal of Florida (Aspidiotus ficus  
Riley), on a fig plant (Ficus nitida), in  
a conservatory of the botanical depart-  
ment of the State University. Later  
investigation proves the first super-  
stition to be correct.

The scale seems to have been intro-  
duced into this country from the island  
of Jamaica, where it is probably na-  
tive. It is common in Cuba and Vera  
Cruz, Mexico. It has been reported from  
Japan, Australia and California, but  
seems to be not well verified from the  
last named locality, although there are  
several published reports of its oc-  
currence there. It is particularly in-  
jurious to the orange trees in Florida.  
Just how it came to Ohio can not now  
be safely stated, as there is no de-  
finite information at hand whence  
it came. The scale was first allowed  
to spread from this point. We may  
not be surprised, however, to find its  
occurrence in conservatories, but it is  
very doubtful if it will ever become  
acclimated to the natural climate of  
even the lowest latitude of Ohio.

The scales are all nearly circular,  
the largest of the female scales being  
about 1-12 inch in diameter and the  
males about 1/4 as large. They occur  
on both sides of the leaves on this plant.  
Although it is called "red scale" it is  
only the scales a few days old that  
have any red color and then they are  
pinkish. The mature scales are brown,  
a little lighter colored at the apex. In  
its native home it is said to produce as  
many as five generations in a season,  
but would probably not be so prolific  
under glass. The young scales have  
been moving on to the young leaves of  
the plants on which they are found  
during the last half of October.

Most Tools Are Fat.  
After a tour of observation on the  
famous hotel kitchens of New  
York, I have come to the conclusion  
that the most interesting thing about  
them is the physics of the fat on the  
tools. Most cooks are fat or incline  
to stoutness. Just why this is so I am  
unable to explain precisely, but there  
must, of course, be ample reason for  
it. Perhaps it is the continuous con-  
tact with nutrient oils, fats, greases,  
pots and kettles, the tasting of all the  
good things, and the general warmth  
of the kitchen. Why should not a man  
be fat who lives in an atmosphere of  
appetizing smells? - N. Y. Press.

BEANS are the most profitable animal  
for the trappers in Maine this season,  
on account of the large amount of oil  
taken from their bodies, and which is  
sold at \$1 a gallon.

STEEL has been used for shipbuilding  
only about thirty years, yet it is es-  
timated that 96 per cent of the vessels  
built at the present day are of steel.

Home Culture.

There has come to our notice re-  
cently, an enterprise which has been  
organized for the purpose of educating  
in their own homes, the classes of  
people who either have not had  
the opportunity in the past, or who  
do not now have an opportunity to  
study in the public schools. To this  
beneficent organization we are more  
than pleased to extend our hearty  
greeting, and wish it all the success  
the undertaking deserves. The one  
thing which this country needs is a  
more general education for the work-  
ing people. It is the idea that has led  
many great thinkers to advocate home  
study, particularly where outside in-  
struction is not convenient. The old  
half and quarter hours, if properly  
applied, will give anyone who de-  
sires it a liberal education. It is the man  
that devotes a few spare minutes  
each day to study, who advances from  
day laborer to foreman; who becomes

## What is CASTORIA

Castoria is Dr. Samuel Pitcher's prescription for Infants  
and Children. It contains neither Opium, Morphine nor  
other Narcotic substance. It is a harmless substitute  
for Paregoric, Drops, Soothing Syrup, and Castor Oil.  
It is Pleasant. Its guarantee is thirty years' use by  
Millions of Mothers. Castoria destroys Worms and allays  
feverishness. Castoria prevents vomiting Sour Cud,  
cures Diarrhoea and Wind Colic. Castoria relieves  
teething troubles, cures constipation and flatulency.  
Castoria assimilates the food, regulates the stomach  
and bowels, giving healthy and natural sleep. Cas-  
toria is the Children's Panacea - the Mother's Friend.

Castoria.  
"Castoria is an excellent medicine for chil-  
dren. Mothers have repeatedly told me of its  
good effect upon their children."  
Dr. G. C. Osmond,  
Lowell, Mass.  
"Castoria is the best remedy for children of  
which I am acquainted. I hope the day is not  
far distant when mothers will consider the real  
interest of their children, and use Castoria in-  
stead of the various quack nostrums which are  
'satisfying their loved ones, by forcing opium,  
morphine, soothing syrup and other harmful  
agents down their throats, thereby sending  
them to premature graves.'"  
Dr. J. F. Kitchener,  
Conway, Ark.  
The Centaur Company, 77 Murray Street, New York City.

the master mechanic; the head of the  
office.  
Few persons seem to be aware, in  
regard to the subject of education,  
how largely a willing student  
can dispense with external aid.  
The opinion, also common, that to  
learn anything in science, art, or any  
of the higher branches, beyond the  
first rudiments, the learner must place  
himself in the hands of some gifted  
professor, and carry on his labor in  
the atmosphere of the classroom, is a  
mischievous delusion.  
While we would not deny our  
magnificent system of public schools,  
we believe that some system of home  
training is absolutely necessary in  
order that men in all classes and con-  
ditions of life may fit themselves for  
life's work. Not only is it necessary  
for our citizens to understand some-  
thing of what is commonly called the  
higher branches of education, but it  
is also an essential qualification that  
they should have a thorough training  
in business methods, including busi-  
ness laws, business arithmetic, short  
hand, and book-keeping. In short  
to achieve success in life, it is neces-  
sary that men be trained in that which  
will prove the most serviceable to  
them in their vocations.

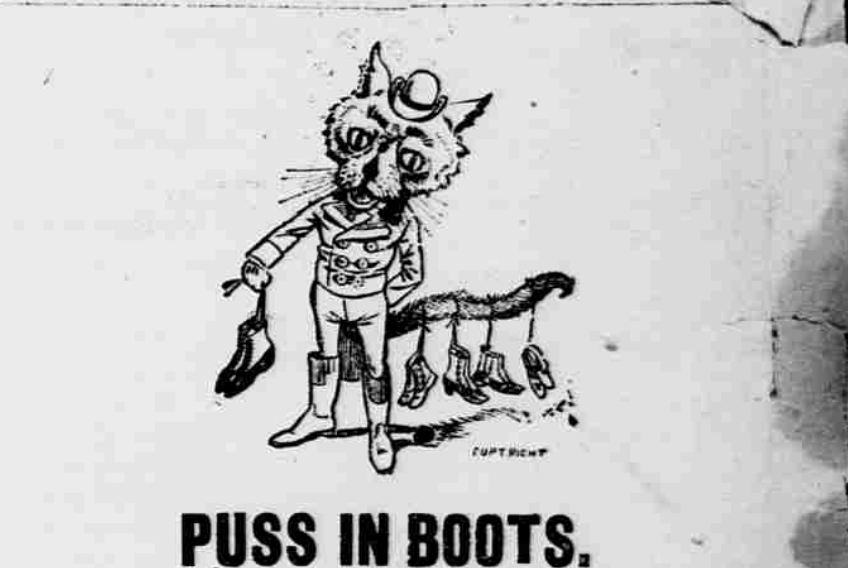

Within the last few years many  
prominent educators have endeavored  
to devise means which would supply  
this great public need. The remark-  
able movement known as University  
Extension, the formation of Chautauq  
circles, the establishment of night  
schools for laboring men, are all evi-  
dences of this desire to bring self-ed-  
ucation within the reach of every citi-  
zen. The most recent attempt to solve  
the great problem of home education  
is the establishment of the Co-Operative  
Educational Association, at Ann  
Arbor, Michigan, the seat of the great  
University of Michigan. This Associa-  
tion having for its purpose the aid  
and encouragement of those who de-  
sire to pursue home study, is desirous  
of extending its work over the great-  
er part of the United States, and in  
order that it may do so, desires the  
heartly co-operation of educators and  
studious people everywhere. Its of-  
ficers will be pleased to correspond  
with any who may be interested, and  
to furnish all information in regard  
to the work they propose to carry on.  
Their announcement appears else-  
where in this paper, and we ask our  
readers to investigate by correspond-  
ing with the Association.

A Long, Long Sigh.

People talk about waiving a sigh  
from India to the Pole. A long, long  
sigh that would be. Talk about sigh-  
ing, why, if all the sighs of the women  
of the world, for just one day, could  
be gathered in one sigh, it would be  
long enough from here to reach the  
farthest fixed star. But thousands of  
women suffer and sigh because the  
victims of disease. Others would  
suffer as sorely and sigh as often if  
they had not been wise enough to use  
Dr. Pierce's Favorite Prescription. This  
is a wonderful recuperator of  
wasted strength and of sovereign ef-  
ficacy in all those derangements and  
maladies peculiar to their sex, by  
which the vitality is sapped and the  
seeds of death are sown.

Dr. R. V. Pierce: Dear Sir I have  
taken the Favorite Prescription and I  
can recommend it to any body that  
suffers with any female disease I have  
tried several doctor's prescriptions but

nothing like it. The Ohio Central  
Mileage Ticket.  
Covers more mileage than any  
ticket in the market. The only  
book good on entire B. & O. system  
west of Pittsburgh. It also includes  
the Big 4 system. Get it and have  
an easy ready ticket over all im-  
portant lines.  
Price \$2.00; good one year. Apply  
to Central Agents, or address  
Moulton Hook, G. P. A.,  
Toledo, Ohio.

PUSS IN BOOTS.  
Is all right a-foot. This is quite necessary,  
not only for puss, but for every one in town,  
this time of the year. Keep the feet all right,  
and health and comfort are apt to be secure.  
ur stock of winter foot-wear embraces pret-  
ty much everything in boots and shoes for in  
and outdoor wear, business and pleasure, town  
and country. After inspecting our collection  
of footwear, there's nothing more to see in the  
way of variety, and certainly no prices can be  
lower than ours. These figures were made  
on a little last, and the goods are good enough  
to last till the flowers come again.
